

Connecting to LETU Email

- [Connect to Email with Android](#)
- [Connect to Email with Apple iOS Devices](#)
- [Connect to Email with LETU Webmail](#)
- [Connect to Email with Outlook \(using Outlook Anywhere\)](#)
- [Connect to Email with Windows phones](#)

MFA and Older Software

As part of the roll out of Multifactor Authentication (MFA) to protect LETU accounts, LETU accounts cannot use older client software that does not support MFA. This includes:

Older Office software (Office 2010 or earlier)

SOLUTION: Upgrades to the latest Office365 installation are available for free download at <http://o365.letu.edu> to all LETU students, faculty and staff during their time at LETU.

Older email software including:

- Many Android smartphone email clients
- Any clients using POP3, IMAP or SMTP

SOLUTION:

Smartphone users are encouraged to use the Microsoft Outlook email application. The Apple iOS Email client also supports MFA. PC users are encouraged to use LETU Webmail at <http://mail.letu.edu> or an updated copy of Microsoft Outlook (available for free at <http://o365.letu.edu>)
